Fire Classification	Crib 5 and Schedule 1, Part 1 of the Furnishings and Furniture (fire)(safety) Regulations 1988 (amended 1989)
Bass Trap Description	CNC cut Wave profile faced triangle wedge corner mounted bass trap

#### Description

The Wave Bass Trap is one of a kind. We have had this exclusively unique profile under development for a considerable amount of time, carefully perfecting the profile to offer the optimum in both performance and looks. We think this is one of the most striking and impressive looking Bass Traps on the market, even if we do say so ourselves.

The importance of effective bass trapping shouldn't be underestimated. If you get the low end energy response right in a room you'll have it singing, if you get it wrong the room will be fighting against you every step of the way. However have no fear once you have installed effective bass trapping such as the Wave Bass Trap your recording and mixes will be all the more better for it. Once you have installed these Wave Bass Traps low end energy will be controlled and any booms or muddiness will be eradicated.

The Wave Bass Trap is a CNC machined Bass Trap with a truly unique profile that adds volume to a bass trap as opposed to removing foam like most other bass trap profile son the market do. All of the bass traps we offer never remove volume from a bass trap, we only add it. This results in improved absorption as surface area per bass trap is increased without sacrificing mass and volume which is highly important in bass trap design. The Wave Bass Trap is available in 2ft of 3ft lengths.

The acoustic foam we use conforms to the more stringent fire tests of Crib 5 and Schedule 1, Part 1 of the Furnishings and Furniture Regulations so you will have peace of mind that the product you are using is safe also. And you also have our guarantee that the foam will stand the test of time. The colour we use has been carefully selected to ensure that it doesn't quickly discolour or fade over time. You won't have the problem of

the foam crumbling and turning to dust either. We know that treating your studio is a big investment and we want to make sure that your investment stands the test of time. The only way to ensure that is by sticking with Advanced Acoustics. We have many years of experience in acoustic treatment and soundproofing. Acoustic Treatment and Soundproofing are the only products we deal with. You won't see us selling any other forms of foam or bedding. Acoustic foam is all we do and we are very good at it as our outstanding feedback and previous customers will testify. Our products have been used by a full host of companies including the BBC, Williams F1 Team, McLaren, Cisco, Cadburys and ITN just to mention a few.

This item is kept permanently in stock. The foam we use is an open cell polyurethane acoustic foam and is available in charcoal only.
